

Big Earth Data

Recommended repositories

As per the Open Data Policy applied for *Big Earth Data*, authors are required to deposit their data and make it freely available. Taylor & Francis do not host the data. Rather, authors are requested to deposit their data with a recognized repository or generalist repository. Please note that the data repository or data centre you are working with must have the ability to mint a DOI (Digital Object Identifier), pre-register a DOI, or provide a similar permanent hyperlink. This ensures that the the URL is persistent and will allow the data set to be cited. Depositing data with some repositories can incur a charge. Check the individual data repository website for more information.

The following list of recommended repositories and data centres are commonly used in this field. If the repository or data centre you are working with does not appear in this list, please contact the Editor (BEDJ@radi.ac.cn).
