#### Restoration of Natural Systems Program

Offered as a partnership between the School of Environmental Studies and the Division of Continuing Studies for over 20 years, this dynamic, interdisciplinary program provides comprehensive knowledge and skills to those interested in the emerging field of ecological restoration. You'll learn about the most current restoration practices from experienced and knowledgeable instructors, surrounded by peers who share your passion for the natural world.

The key strength of the program is its emphasis on a holistic approach, providing training that combines the research and theory of the biophysical sciences with skills for effective collaboration with communities in restoration work.

Achieve your goals at your own pace with online and on campus course options and flexible program completion timelines. Program options include a credit diploma requiring completion of 12 courses (six required and six electives) and a non-credit

certificate requiring completion of 8 courses (six required and two electives). Applicants must have a minimum of two years of post-secondary education and a demonstrated interest in environmental work. Contact us for more information.

Website: <https://continuingstudies.uvic.ca/science-and-ecological-restoration/programs/restoration-of-natural-systems-diploma>

#### Ecological Restoration Professional Specialization Certificate

This non-credit certificate is designed for environmental professionals to seeking advanced training in ecological restoration. Courses in the certificate are offered entirely online, appealing to students throughout the world. Completion of four courses is required to achieve the certificate, but courses may also be taken individually for interest.

The program focuses on:

- incorporating of native species into design
- an ecosystems approach in planning and design of restoration activities
- restoration prescriptions patterned on natural processes
- urban ecosystems and the urban/rural interface
- invasive species control and management
- incorporating plant propagation techniques into restoration project design

Upon completion of the program, you will be able to conduct detailed site assessments and restoration projects that pay special attention to the unique conditions and challenges presented by built and otherwise highly altered environments. Applicants must have an undergraduate degree or equivalent. Contact us for more information.
